Student Management System

System Description

The Student Management System is a database-driven application designed to efficiently manage student records within an educational institution. It allows administrators, faculty, and staff to store, retrieve, and update student-related information such as personal details, enrollment, grades, and course assignments.

The system aims to replace manual record-keeping processes with a centralized and organized digital solution, improving accuracy, accessibility, and efficiency.

Key Functionalities

- **Student Information Management**
  - Add, update, delete, and view student records.
- **Course Management**
  - Manage course offerings, descriptions, and assigned instructors.
- **Enrollment System**
  - Enroll students in courses and track their academic progress.
- **Grade Management**
  - Record, update, and view student grades.
- **User Access Control**
  - Different access levels for administrators, teachers, and staff.
- **Search and Reporting**
  - Generate reports such as student lists, grades, and enrollment summaries.

Stakeholders

- **Students** – Access their academic records and enrollment details
- **Professors/Instructors** – Manage grades and course-related data
- **School Administrators** – Oversee the entire system and manage records
- **Registrar Staff** – Handle student enrollment and records processing
- **IT Personnel** – Maintain and support the system

Core Data Processes

- **Data Input:**
  - Entry of student details, course information, and enrollment data
- **Data Storage:**
  - Organized storage of records in relational database tables
- **Data Processing:**
  - Handling enrollments, grade computation, and updates
- **Data Retrieval:**
  - Querying student information, grades, and reports
- **Data Security:**
  - Implementing user authentication and access control to protect sensitive data

Group Roles

Name	Role	Responsibilities	Signature
Cantor, John Drex F. https://github.com/Grahamm-drx	Project Manager	Oversees project progress, assigns tasks, ensures deadlines are met	
Etorma, Dan Francis S. https://github.com/danfrancissabanaletorma24-cmyk	Database Administrator (DBA)	Designs and maintains the database structure, ensures data integrity	
Briones, Derick N. https://github.com/derickbriones26	Documentation Lead	Prepares reports, documentation, and user guides	
Namia, Kyle Mathew A. https://github.com/kylemathewnamia	SQL Developer	Writes SQL queries, procedures, and handles database operations	
Sambajon, Ryecco Adrian B. https://github.com/Ryecco Viñas, Aljon M. https://github.com/aljonvinas012	QA/Tester	Tests system functionality, identifies bugs and issues	
Salcedo, Gabriel Meshach G. https://github.com/gabby18-gab	Security Officer	Ensures data security, access control, and privacy measures
